

Gábor Harmat

Senior PHP / Symfony / Ibexa
DXP developer

About Me

Since completing my studies, I have been working full-time in web development since 2008. During this time, I have encountered a wide range of technologies, with a strong specialization in Symfony and PHP, while also having a broad knowledge of related technologies.

I am open to any PHP/Symfony opportunities, as I am familiar with and have worked with all versions of the framework. I also open for planning and mentoring while still actively contributing code to projects.

I am also eager to expand my knowledge and strongly desire continuous professional development.

I like all aspects of software development, so I am also open for learning and working in new technologies if that is what is needed.

Recently I started to expertise myself using AI as a coding assistant, I am using Claude Code every day in my job. I also developed an AI based rating system that rates the job applicants based on their CVs and the description of the job, saves to help the processing of the applicants.

Work Experience

January 2015 - present
entrepreneur

As an entrepreneur I mostly work on a franchise project, that provides a website for their clients to advertise their jobs, manage the applicants, make statistics, and fulfill their unique needs about their system (hrfelho.hu). The sites are written in Symfony 1 but there are plans to move to higher symfony versions.

I also developed some Symfony based (4.x, 5.x, 6.x) specialized webshops with many individual needs,

May 2010 - 2026
Webtown Informatika Kft.

Web developer

At Webtown I was working in an agile team with Ibexa DXP and plain Symfony, creating unique features and softwares for the clients.

Besides the company's own projects we contributed the development of several Ibexa DXP projects for a German Ibexa partner.

I used English very often, because we had lots of international clients.

January 2008 - January 2010
HTE Industrial Kft.

I developed the website of the Chinese-owned company to help advertising their clothing products.
